Dear Colleagues,

We cordially invite you to the next meeting on Endothelium-Dependent Hyperpolarizations (EDH) that will be held from Sept. 14th to 17th on the island of Fyn in Denmark. It will not be easy to match the atmosphere of earlier meetings on this topic that were held in Vaux-de-Cernay (France), but we will try! An exciting scientific program of basic, translational and clinical research is planned, based primarily on submitted abstracts, together with a social program revealing some of the finest history, nature and cuisine of Denmark.

Abstracts can be submitted at www.sdu.dk/edh2015. Copy this link into your browser for more information.

Everyone interested in the latest developments in endothelium-derived factors, vascular biology/pharmacology and cardiovascular diseases should come and join EDH researchers from all over the world! Our meeting precedes the annual meeting of the Scandinavian Physiological Society (Sept. 17.-20. Aarhus, DK) and is supported among others by Acta Physiologica that considers publishing review articles by the speakers at our scientific meeting.

Abstracts can be submitted between March 1st and June 15th 2015.

We look forward to welcoming you to Nyborg and an exciting and unforgettable scientific experience,

- Pernille Hansen - Boye Jensen - Jo G. R. De Mey -
- Jenny Nystrøm - Paul M. Vanhoutte -
Opening Lecture:

2nd Tudor Griffith Memorial Lecture
Hiroaki Shimokawa, MD (Sendai, Japan)
